

ANJO TIMOTHY

The Crop

Timothy is one of the latest heading of all cool season grasses with excellent palatability and winter hardiness as one of its most important features. Anjo is a medium maturing timothy variety with good yield potential, fast spring green-up and excellent disease resistance. This makes it an excellent choice in either pure timothy or mixed hay situations. Anjo has a semi-erect growth habit in the spring and very low potential for lodging, thus improving ease of mechanical harvest.

Excellent for: pure grass hay, especially into the horse market; the grass component in an alfalfa/grass hay mixture; and can be used for horse pasture mixtures.

Management

- Planting Depth: 1/4 - 1/2 inch
- For optimum quality and yield, harvest at early boot stage

Features

- Medium Maturity
- Quick Spring Green-up
- Excellent Disease Resistance

Benefits

- Will match well with alfalfa and orchardgrass maturity
- Enables earlier harvest and better weed competition
- Healthier plants and better persistence.

Performance Data

VARIETY	TONS DM/ACRE (5/28/15)
Anjo	3.28
Derby	3.31
Climax	3.18
Crest	2.99
Clair	2.94
Richmond	2.90

Test mean 3.18

*Test was located in Lafayette, IN and planted fall of 2014.
Test mean also includes experimental varieties not listed above.*
